ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.*

(54) Title: MOTOR CONTROL AND DRIVER FOR ELECTRIC BOOSTING APPLICATION

(57) Abstract: The invention proposes a system for driving a compressor, comprising an induction motor (2) for driving the compres-
sor (3), said induction motor including a squirrel cage rotor, and a controller (1) for controlling the induction motor, said controller
comprising a memory for storing drive patterns for driving the induction motor, a first frequency generation means for generating
a field frequency based on a field command and/or a second field generation means for generating a voltage frequency based on a
voltage command, wherein a drive pattern is extracted from the memory based on the generated frequency or frequencies. Alterna-
tively, the invention proposes a system for driving a compressor, comprising an induction motor (2) for driving the compressor (3),
said induction motor including a squirrel cage rotor, and a controller (1) for controlling the induction motor, wherein the controller
is adapted to distinguish between a steady state and a transient state of the induction motor.
